Subject: RE: OR

Hi, Jill. I got the concurrence package. It doesn't have the language that Tom G got approved from OGC management. Was that an over-sight? Can you make that change to Enclosures 1 and 2 and email me and I'll put in concurrence package? Is there other language that is pending about the temperature TMDL waters? Can you send what is pending?

Great! Thanks Tom.

My understanding is we need one last run by Anna, and to hear back from Jim Curtain. We're almost there!

David signed off on this revision. See attached. Thanks.

The EPA also is approving Oregon's decision not to list marine waters with respect to aquatic life impairments because there are no direct scientific observations of biological degradation within Oregon state waters. On March 29, 2017, ODEQ provided comments and its rationale for why it determined that the existing data and information do not support listing Oregon's jurisdictional ocean waters at this time. See 40 CFR §130.7(b)(6)(iii), (iv). The EPA reviewed ODEQ's rationale and determined that it was reasonable for the State not to list its marine waters for aquatic life use impairment at this time for the following reasons. Although several studies document a correlation between the dissolution of pteropod shells and corresponding aragonite saturation state, the EPA acknowledges that the current *in situ* data indicating biological impairment to pteropods is from outside of Oregon's state waters. The State noted that without data about the health of the extant aquatic life within Oregon's waters, it was unable to conclude that there have been detrimental changes to the resident biological communities.

Attorney Client / Deliberative Process / Ex. 5

Attorney Client / Deliberative Process / Ex. 5

Attorney Client / Deliberative Process / Ex. 5 EPA has determined that, on that basis, it is reasonable for the State to decline to list its marine waters at this time. As water chemistry data taken inside Oregon's state waters document similar conditions that have been observed to be corrosive to pteropods outside state waters, EPA continues to recommend that Oregon's future research efforts in state marine waters include the collection of pteropod data to further understand current water quality conditions and aquatic life impacts within Oregon's territorial waters. The EPA's responses to all ODEQ's comments as well as other comments received on aquatic impairments are contained in Enclosure 2: "EPA Response to Comments on Oregon's 2012 303(d) List Partial Approval/Partial Disapproval," and Enclosure 3: "EPA Site Specific Response to Comments on Oregon 2012 303(d) List," attached to this decision document.

That was my read as well Jill. I didn't agree with the comment bubble proposal, but didn't have a strong reaction to the specific language inserted. However, based on what we've said in the past, I think Jill's edits would be the best bet.

Personally, no, I'm not comfortable with that. That is absolutely contrary to what we said in our briefing papers. We said during the last list, when we looked at extrapolating from Tribal to state waters, it was not appropriate because of changes in riverine inputs, land use, etc. We said in the briefing papers for this list:

Hi all,

I just ran into John Goodin and he talked to Anna and was told that we are good to go from their end. She just wants OGC's ok on the OA rationale piece. She didn't need review of the rest, just the OA. So...Tom, if you can follow up on that end and let me know if you need anything else, I think we can get this puppy outta here 😊 Thanks.

jill
